

# Specialized in Bespoke & OEM Manufacturing

## VETERINARY LIVESTOCK Tools & Equipments

### Our Services What we are specialized in?

#### OEM Manufacturing

With OEM (Original Equipment Manufacturing Products) products, you are right from the start – it is the basis for a trusting relationship and a key to the loyalty of your customers.

With excellent OEM assortments from our company you not only convince at first sight, you lay the basis for long-term co-operation and loyal customer relations.

In our certified and FDA-Approved Pakistani manufacturing Units, we manufacture OEM pallets for your company.

It goes without saying that every production step of each instrument is carefully monitored and strictly controlled during production, and the final inspection of the products perfected by hand is carried out according to the principle of dual control.

The highest quality standards in every respect and a complete documentation to the raw material used have been standard in our company for many years.

If you want to offer your customers the best instrumental quality and maximum transparency, we are at your side and, together with you, design your own OEM range, which is presented in every respect positively and has proven itself in practice over many years.

We are also open to your ideas and special wishes in Original Equipment Manufacturing. Talk to us and we will find convincing solutions together with which you will win your customers.

#### Standard Instruments

Only with high quality you can convince your customers – this also applies to standard medical instruments. The daily use of classical instruments and the handling of disposable instruments quickly reveal the quality of the product and bring to light errors and inferior values.

Your customers will need the best craftsmanship in everyday practice and will only remain faithful to you for many years if they meet the high professional requirements and the enormous practical requirements to the full extent. With standard instruments manufactured by us for single or multiple use, you are always on the safe side: in every respect, you can see and test the best quality according to the highest standards.

#### Customized products

Would you like to set individual accents, meet special customer requirements or make special adjustments to standard instruments?

Our entire range of standard instruments and OEM products is manufactured by well-trained specialists and can be adapted to your special requirements at any time.

We manufacture custom-made instruments for you in the highest quality and masterly processing, which makes you a specialist for unique, high-quality products. With our experience and concepts, nothing stands in the way of your success so don't hesitate to contact us!

## Our Specialization Services

- 1. OEM Manufacturing
- 2. Private Labeling
- 3. Customization
- 4. New Development

# Quality Management & Certifications

How assure we are about quality!

### DIN EN ISO 13485 (ISO 9001)

We attach great importance to careful quality management for the production of our products, which is certified according to DIN EN ISO 13485. In essence, this standard corresponds to the earlier DIN ISO 9001, but relates to specific requirements for veterinary medical products, e.g. With regard to product safety, documentation and the establishment of risk management for the products.

### CE Marking

As a manufacturer certified according to DIN EN ISO 13485, we create a device master file for each of our products, carry out a risk management report and report our product range to the Institute for Medical Documentation and Information. Any medical OEM or specialty product manufactured by us complies with the requirements laid down in the European Union harmonization legislation and may bear the CE marking.

### FDA Approval

As a manufacturer of medical devices, we carefully take care that our production facilities comply with the regulations of the US Food and Drug Administration (FDA)

Administration (FDA). Our plants have been audited by the FDA and approved for the manufacture of medical devices for marketing on the US market.

### Complete Documentation

A complete documentation of all production steps and the origin of all raw material batches used in production is self-evident in the production of OEM medical products and Customized / Bespoke products. Any product range for classical or one-way instruments manufactured for you will always be accompanied by all certificates and certificates up to the origin of the steel grades used.

### Transparency

Your trust is our capital, so we always offer you the highest transparency and open, binding communication. Whatever information you need from us – Contact us!
