Message from CEO

What We Can Do For You?

I have been into the development of medical instruments since 2007, from the very initial production step to marketing, I have firm business grip over all aspects of the business. With this experience, I have realized that customer satisfaction and persistent quality are the core aspects of running any business successfully.

This is the reason me and my team pay keen attention to the precision of any instrument that we manufacture. At the same time, I realize that this is a business related to healthcare and any problem in instrument may lead to any life loss so we strive to produce each and every instruments with exact precision.

I strongly believe in international quality standards and inside our production facility, we religiously follow international standards that we have acquired so far FDA, cGMP, CE, ISO 9001 & ISO 13485. I found that clients' input is very much important in upgrading and we welcome any suggestion or feedback that comes from our clients.

I will be thankful to you for choosing EPISURG as your trusted partner and join hand to serve the humanity and livestock together.

Faisal Luqman (CEO)

Our Specialization & Services

1. OEM Manufacturing
2. Private Labeling
3. Customization
4. New Development

OEM Manufacturing

With OEM (Original Equipment Manufacturing) products you are right from the start – it is the basis for a trusting relationship and a key to the loyalty of your customers.

With excellent OEM assortments from our company you not only convince at first sight, you lay the basis for long term co-operation and loyal customer relations.

In our certified and FDA approved manufacturing units, we manufacture OEM pallets for your company.

It goes without saying that every production step of each instrument is carefully monitored and strictly controlled during production, and the final inspection of the products perfected by hand is carried out according to the principle of dual control.

The highest quality standards in every respect and a complete documentation to the raw material used have been standard in our company for many years. If you want to offer your customers the best instrumental quality and maximum transparency, we are at your side and, together with you, design your own OEM range, which is presented in every respect positively and has proven itself in practice over many years.

We are also open to your ideas and special wishes in Original Equipment Manufacturing. Talk to us and we will find convincing solutions together with which you will win your customers.

Standard Instruments

Only with high quality you can convince your customers – this also applies to standard instruments.

The daily use of classical instruments and the handling of disposable instruments quickly reveal the quality of the product and bring to light errors and inferior values.

Your customers will need the best craftsmanship in everyday practice and will only remain faithful to you for many years if they meet the high professional requirements and the enormous practical requirements to the full extent. With standard instruments manufactured by us for single or multiple use, you are always on the safe side: in every respect, you can see and test the best quality according to the highest standards.

Customized products

Would you like to set individual accents, meet special customer requirements or make special adjustments to standard instruments?

Our entire range of standard instruments and OEM products is manufactured by well-trained specialists and can be adapted to your special requirements at any time.

We manufacture custom-made instruments for you in the highest quality and masterly processing, which makes you a specialist for unique, high-quality products. With our experience and concepts, nothing stands in the way of your success so don't hesitate to contact us!

Quality Management & Certifications

How Assure We Are About Quality!

Only through security, quality and sustainability we create values and new perspectives in the production of medical OEM products, custom-made products and innovative new developments.

With the careful adherence to all legal requirements, quality management according to the highest requirements and a complete documentation of all production steps and all raw materials used, we create a stable and solid basis for a trusting and long-term cooperation with you.

DIN EN ISO 13485 (ISO 9001)

We attach great importance to careful quality management for the production of our products, which is certified according to DIN EN ISO 13485. In essence, this standard corresponds to the earlier DIN ISO 9001, but relates to specific requirements for veterinary medical products, e.g. With regard to product safety, documentation and the establishment of risk management for the products.

CE Marking

As a manufacturer certified according to DIN EN ISO 13485, we create a device master file for each of our products carry out a risk management report and report our product range to the Institute for Medical Documentation and Information. Any medical OEM or specialty product manufactured by us complies with the requirements laid down in the European Union harmonization legislation and may bear the CE marking.

FDA Approval

As a manufacturer of medical devices, we carefully take care that our production facilities comply with the regulations of the US Food and Drug Administration (FDA) Administration (FDA). Our plants have been audited by the FDA and approved for the manufacture of medical devices for marketing on the US market.

Complete Documentation

A complete documentation of all production steps and the origin of all raw material batches used in production is self-evident in the production of OEM medical products and Customized / Bespoke products. Any product range for classical or one-way instruments manufactured for you will always be accompanied by all certificates and certificates up to the origin of the steel grades used.

Transparency

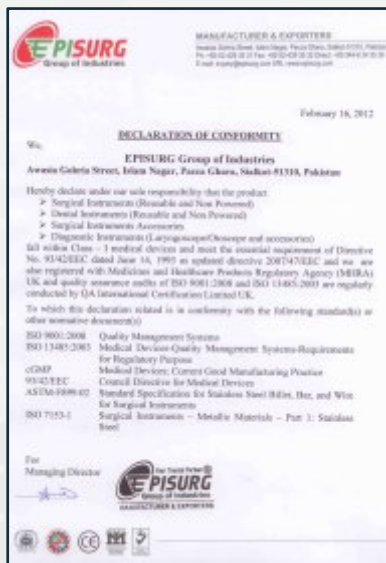

Your trust is our capital, so we always offer you the highest transparency and open, binding communication. Whatever information you need from us – Contact us!
